

eConnect

APPLICATION INTEGRATION TOOLKIT

FLEXIBILITY FOR OPERATING YOUR WAY

eConnect provides an open, flexible connection to a broad choice of third-party applications, allowing the seamless exchange of data with your AMSI web-based software. With eConnect you are able to extend the value and functionality of your core applications through integration with service providers for resident screening, renters insurance, on-line payment systems, affordable housing and much more.

eCONNECT

eConnect is a series of Web services and other data exchange capabilities for the enablement of third party integration. Using the power of eConnect, AMSI has cooperative integration with many of the leading service providers you may be using today. Additionally, we have partnered to resell the leading solutions for on-line payments and resident and community web sites.

Real-Time Connectivity

Receiving real-time results from services you depend on to do business is invaluable. eConnect allows bi-directional exchange of information, allowing you to securely send and receive data between applications. eConnect allows for real-time or batch data exchange. With eConnect, you can:

- Close leases quickly and secure new residents immediately with credit screening integrated into the application process.
- Provide convenient payment options to tenants reducing late payments and the workload of site staff with on-line payment systems.
- Use eConnect to transport financial data to third party accounting products.

- Other eConnect integration types that improve efficiency and increase occupancy include:
 - Resident screening
 - Affordable Housing
 - Internet Listing Services (ILS)
 - Lease Forms and Renters Insurance
 - Utility Billing
 - Revenue Management

MITS Compliant

eConnect web-services are compliant with the MITS Standard (Multifamily Information and Transactions Standard) where available. This provides interoperability between any MITS compliant application giving you access to a world of choices.

MITS is an industry-wide initiative to develop common data standards and extensible mark-up language (XML) protocol to facilitate data and systems integration. This enables apartment firms to improve their operations and reduce their costs by making systems integration and data exchange technologies more effective and efficient.

MITS is funded and sponsored by a broad group of industry firms and is supported by the National Multi Housing Council and national outreach partner the National Apartment Association. AMSI is a member of the MITS Technical Advisory Committee.
